

Device Security with On Prem ePO

Proven centralized and comprehensive security management platform that is open and extensible

Legend: **McAfee** **3rd Party** **Infrastructure**

McAfee ePolicy Orchestrator (McAfee ePO) provides a centralized management console that simplifies and accelerates your security effectiveness with visibility and control from device to cloud.

Working six separate consoles is not the same as working an integrated console. Security admins should be inspired with a truly centralized management platform to help prioritize alerts.

Throwing more tools at a problem causes chaos and siloed results. Security tools should work together with orchestrated controls, shared intelligence, and automated workflows.

An open platform allows you to add new capabilities and intelligence while enabling tools or native controls such as Microsoft Windows Defender to collaborate as the threat landscape evolves.

Essential risk management assets at your fingertips

Automated responses

The open platform facilitates rapid adoption of security innovations as new threat categories emerge. Our security management architecture scales for organizations of all sizes, significantly reducing the number of servers to deploy.

Automated security, compliance workflows, and a personalized workspace help you rapidly identify, manage, and respond to vulnerabilities, changes in security postures, and known threats from single console.
