

# Device Security with ePO in AWS

Simply your security administration while providing advanced protection with machine learning along with managing additional security solutions

**ePO Management**

**ePO in AWS**

- McAfee ePO Server
- Windows Defender Management
- Data Exchange Layer Broker

**Devices**

**Solutions:**

- Endpoint Security
- MVISION Endpoint
- Windows Defender
- MVISION Mobile
- IoT Security
- DLP
- Encryption

**Cloud Servers**

**Solutions:**

- Endpoint Security
- MVISION Endpoint
- Windows Defender
- Server Security
- IoT Security
- DLP
- Encryption

**Customer Network**

**Devices**

**Solutions:**

- Endpoint Security
- MVISION Endpoint
- Windows Defender
- Server Security
- Mobile Security
- IoT Security
- DLP
- Encryption

McAfee ePO is a centralized, extensible platform that enables you to manage and enforce your security policies. It detects threats and helps to protect endpoints against these threats in your network.

In less than an hour, you can use a single console—the McAfee ePO console—to manage endpoint security, data loss prevention, encryption, server security in the public cloud, and the information-sharing Data Exchange Layer (DXL).
